By 2020, at least 17 per cent of terrestrial and inland water, and 10 per cent of coastal and marine areas... are conserved through effectively and equitably managed, ecologically representative and well connected systems of protected areas **and other effective area-based conservation measures**...

Recognising and reporting other effective area-based conservation measures

World Commission on Protected Ansas Task Forok on OECMs

2019

Recognizing and reporting other effective areas-based conservation measures

OECM "... a geographically defined area other than a Protected Area, which is **governed and managed in ways that achieve positive and sustained long-term outcomes for** the in situ **conservation** of biodiversity, with associated ecosystem functions and services and where applicable, cultural, spiritual, socioeconomic, and other locally relevant values."

OECM potential & possibility

- Possibility to recognize stewardship of IPLCs
- ~25% of land, intersecting ~40% PAs and intact landscapes, managed by IPLCs, but potential for OECMs unknown

- Definition lacks metrics to assess sites as OECMs, and formal processes for identifying, listing, and reporting
- Many (most?) OECMs not yet recognized
- Strong overlap with SEPLS

"dynamic mosaics of habitats and land uses where the harmonious interaction between people and nature maintains biodiversity while providing humans with the goods and services needed for their livelihoods, survival and well- being in a sustainable manner"

envirohistorynz.com

livingoceansfoundation.org

GBF Target 3 (DRAFT 1) Ensure that at least 30 per cent globally of land areas and of sea areas, especially areas of particular importance for biodiversity and its contributions to people, are conserved through effectively and equitably managed, ecologically representative and wellconnected systems of protected areas and **other** effective area-based conservation measures and integrated into the wider landscapes and seascapes.

2022
