Harmonizing Growth and Nature: Sustainable Forestry Boosts Biodiversity in Tropical Forests

Pond5

ITTO conserves tropical forest biodiversity through sustainable forest management (SFM). Our work aligns economic growth and ecological well-being, maintaining the delicate balance between human needs and the protection of flora and fauna.

In 2023, a unique new species of a palm that flowers and fruits underground was announced in Lanjak Entimau Wildlife Sanctuary in Sarawak, Malaysia. The species first encounter happened during implementation of an earlier ITTO project in the area.

Biodiversity in tropical forests thrives with SFM and ITTO aims to protect the intricate web of life for future generations.
