Principles and Strategies for Integrated Landscape Fire
Management through Collaborative Governance

Zhimin Wu
Forestry Director, FAO

Climate change and land-use change fuel more frequent and intense wildfires

Global change in wildfire events

A paradigm shift is necessary...

From reactive responses...

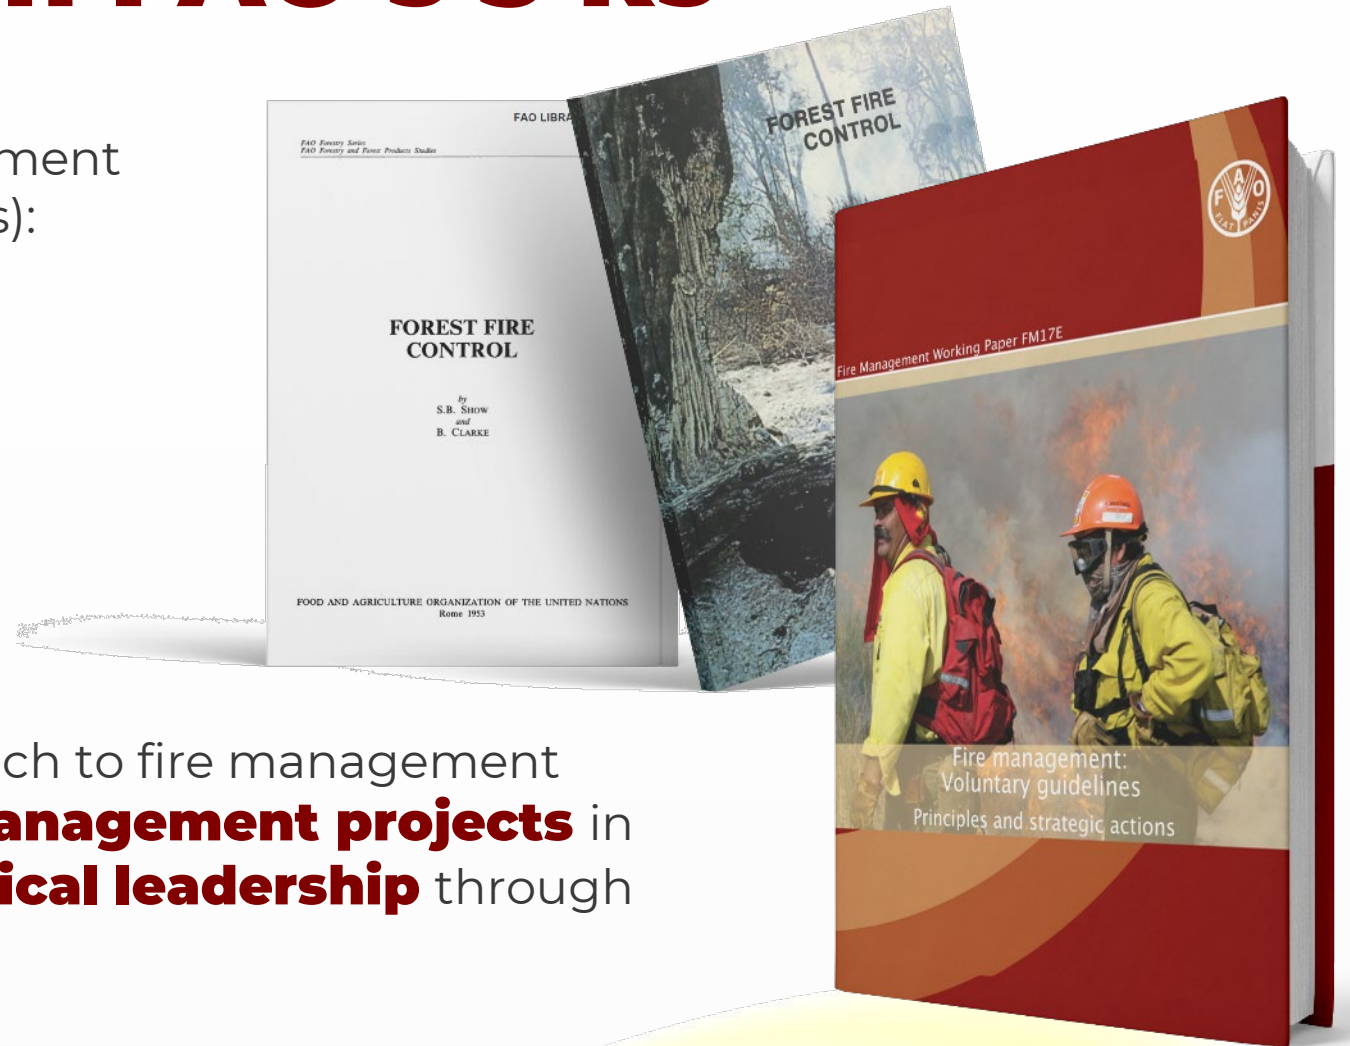

to proactive measures.

Integrated Fire Management through FAO's 5 Rs

FAO champions Integrated Fire Management through the use of five elements (the 5Rs):

- **Review and Analysis**
- **Risk Reduction**
- **Readiness**
- **Response**
- **Recovery post fire**

FAO has promoted an integrated approach to fire management since 1953, including through **80 fire management projects** in over **50 countries and global technical leadership** through the FAO Voluntary Fire Guidelines.

The Global Fire Management Hub

5 PILLARS

Knowledge sharing

Capacity building

Wildfire Resilient Communities

Fire Risk Assessment and Early Warning

Policy support

Aims to strengthen countries' capacities to implement Integrated **Fire Management**

XV WORLD FORESTRY CONGRESS

Building a Green, Healthy and Resilient Future with Forests

2-6 May 2022 | Coex, Seoul, Republic of Korea

Assuring the Future of Forests with Integrated Risk Management (AFFIRM)

Funded by the Republic of Korea

Piloted in Mekong region

Joint development of the Global Fire Management Hub

**With
generous
support
from...**

Thank you
