| ORIGINAL LANGUAGE | ENGLISH  |

#### SUMMARY

The project results from an overall assessment of the priority needs of the forestry sector of Liberia in the period of reestablishment of a functional forestry authority after many years of civil war. It aims to address two aspects of the reform process, including (i) the formulation of a comprehensive reforestation policy to be applied in forested areas and of an afforestation strategy in non-forested areas and (ii) building of human capacities in the field of forest restoration and plantation forestry. The project will assess the status of existing plantations; develop silvicultural and business approaches in forest restoration, enrichment planting, timber plantations, agroforestry, biofuel/firewood and watershed protection. Thus, it contributes to the overall aim of Liberia's 2006 National Forest Policy and Implementation Strategy based on the 3C-Approach (Commercially-based, Conservation-oriented and Community-involvement) which translates the three basic concepts of sustainable forest management (ecological, economic and social sustainability).

## BOX 1: "The 3 Cs" of Liberia's Approach to forestry

The "3Cs" have been developed as a concept in the current forest policy formulation process. They can be seen as the Liberian concept of sustainable forest management. Developing the 3 Cs means to apply 3 concepts in managing the forest area: Commercially-based Conservation-oriented Community-involvement. The 3Cs literally translate the 3 basic concepts of SFM: economic, ecological and social sustainability

## PART I: CONTEXT

## 1. <u>Origin</u>

After more than 14 years of prolonged civil conflict that led to great loss of life, economic collapse, mass migration and internal displacement as well as destruction of much of the country's infrastructure, Liberia, since the year 2004, is reconstructing its social, political, economic and ecological environment. Forests, which have suffered extremely from these problems, play a crucial role in this period of rebuilding a functional Nation. In this post-conflict period, social, economic and political changes have created expectations that will present new challenges to a still weak forestry administration and other stakeholders in the sector. To meet these challenges and avoid problems of the past, it will require policy and strategy reforms across the forests sector. International support thus is crucial to rebuild a viable forest sector that meets the expectation as a driving force for sustainable development in the country.

The present project proposal is based on an overall assessment of the priority needs of the forestry sector of Liberia in this period of reestablishment of a functional forestry authority. The topic of the proposed project has been defined together between ITTO and senior staff of the Forest Development Authority (FDA) and coordinated with the Liberia Forest Initiative (LFI). The LFI is a comprehensive multi-donor approach that coordinates international support activities to the forests sector in Liberia. The project idea arises from the Joint Work Program of FDA and LFI to redress Liberia's forestry to sustainable development in Liberia. The proposed project that aims at preparing a comprehensive national reforestation policy and afforestation strategy covers one of the priority areas in this program. Thus, ITTO support helps to prepare for the resumption of forestry operations in Liberia by contributing to the design and implementation of a basic forest policy strategy and to build human capacity, which is so lacking in the country.

## 2. Sectoral Policies Relevant to this Project

Historically, the main focus of the forestry sector in Liberia has been the commercial harvesting of timber. Through an intensive dialog between government, national and local stakeholders, as well as international partners, conducted between 2004 and 2006, a consensus has been reached on the optimal use of forest resources. The new **National Forest Policy and Implementation Strategy** of 2006 (NFPIS) has a guiding principle a more balanced and integrated development of Liberia's forests for commercial, community and conservation uses (see also Box 1 that explains the "3-C" approach of Liberia's forest policy). The policy chapters of the NFPIS that have been elaborated in a multi-stakeholder process emphasize the following key policy issues as priority for the country:

- The need to resume control over the forest estate and rehabilitate the economy;
- The problems of receding natural forest cover, increased poaching and illegal harvesting;
- The increasing pressure on forests to produce more forest products and the potential offered by plantation development and agroforestry;
- The very week management of the forest estate in the past and, therefore, the need for change driver by strong political will coupled with appropriate forest governance;
- The need for commitment to international initiatives in the forestry sector, including concerted action at the regional and sub-regional levels; and
- The need to manage forests sustainably, to reduce poverty, improving living conditions, reducing conflict and improving welfare of marginalized groups.

Chapter 5.2 of the NFPIS of 2006 contains a specific chapter on reforestation and forest plantation development. Three major activities have been formulated in NFPIS to be implemented over the next two years, as follows:

- 1. (5.2.1) Develop and implement a national reforestation program, based on sound scientific and technical principles (best practices) and including realistic annual targets for new planting, enrichment planting and agroforestry;
- 2. (5.2.2) Develop appropriate mechanisms and incentives to encourage involvement of the private sector and local communities in reforestation
- 3. (5.2.3) Encourage tree planting for environmental improvement and income generation in green belts within and around urban areas.

An important reference to the preparation of a comprehensive reforestation policy and afforestation strategy is made in the new **National Forestry Reform Law** of 2006. Under Chapter 8 (Environmental Protection) of the forestry Act, in Section 8.3, it is stipulated:

"(a) The Authority, within two years of enactment of this Law, shall:

(i) identify suitable sites for reforestation and afforestation

(ii) develop a national strategy to address deforestation and promote silvicultural practices that will expand and enrich the national forest endowment

- (b) The Authority shall identify and protect Wetlands and areas with fragile soils on Forest Lands, and require every Holder to identify and protect Wetlands and areas with fragile soils where that Holder is conducting is Operations.
- (c) The Authority shall promote the planting of Indigenous Species of trees.
- (d) As appropriate, the Authority in its contracts shall obligate industry to promote forest enrichment planting and improved forest quality through best practices silvicultural treatment
- (e) The Authority shall establish a central seed bank and other aids to forest culture, as necessary."

The project fully addresses the requirements made in the new National Forest Policy and Implementation Strategy of 2006 and, with exception of notion (e), the requirements made in the new National Forestry Reform Law. The project thus addresses one of priority areas for forest development of the Liberian Government.

## 3. Programmes and Operational Activities Relevant to the Project

The proposed project has been selected in close consultation with the FDA and the multi-donor Liberia Forestry Initiative (LFI). The LFI, a joint approach between the US-Forest Service (USFS), the World Bank (WB), FAO, Conservation International (CI), Fauna and Flora International (FFI) and IUCN supports FDA in an overall reform process of the forestry sector. A joint work programme of FDA-LFI is guiding that collaboration. The FDA-LFI work programme strategize a number of objectives and outputs that are considered as essential in order to establish sustainable forest management and a viable and functional forestry administration in Liberia. The work plan comprises the following main working domains (the main supporting agencies for a particular activity are added in brackets):

## **<u>1. FDA Commercial Department</u>**

- 1. Educate stakeholders and the general public on the new national Forest Reform Law and new FDA reforms (USFS, WB)
- 2. Allocate up to 2 million ha of forests into Timber Sales Contracts and Forest Management Contracts (USFS, FAO, WB)
- 3. Grant and administer Chain of Custody contracts (USFS)
- 4. Develop, together a mechanism to share benefits from forest contracts (WB)
- 5. Implement and set rules and regulations for forest management in contracts (USFS)
- 6. Develop incentives to modernize the wood-processing industry (WB, FAO)

## 2. FDA Community Department Workplan

- 1. Develop local understanding of community forestry context (USAid, WB, IUCN, FFI)
- 2. Develop and implement standards on community tenure rights and access (IUCN, FFI, WB)
- 3. Develop and test models for community empowerment and forest management (IUCN, USAid, WB))
- 4. Update and implement policies and regulations on bushmeat, wood energy and NTFP (IUCN, WB)
- 5. Empower local communities to establish rights and responsibilities in respect to FM (USAid, WB, IUCN)
- 6. Provide extension and technical assistance in community forest management (USAid, WB, IUCN)

## **3. FDA Conservation Department**

- 1. Manage existing protected areas in accordance with the National Forest Reform Law (FFI, CI)
- 2. Work and conduct social and biological survey of proposed new protected areas (WB, FFI, CI)

- 3. Develop an implement programs to support income generating activities in rural communities around protected areas (*CI, FFI, WB*)
- 4. Develop a new wildlife management law (USFS, WB, FAO, FFI, CI)
- 5. Ensure conservation at the landscape scale to conserve integrity of biodiversity and maintain ecological services as consistent with the 3C philosophy (*WB, FFI, IUCN*)
- 6. Develop collaborative agreements to establish trans-boundary conservation areas (none)

## 4. FDA Research and Development Workplan

- 1. Develop and maintain an accurate spatial database of forest information (WB, FAO)
- 2. Develop and coordinated forest science research programme (FAO, WB)
- 3. Redesign national forest boundaries to more accurately encompass current standing forest areas and settlements (none)
- 4. In collaboration with LISGIS, acquire new data on Liberia's geography (FFI partly)
- 5. Develop research program on NTFP and wood-energy issues (WB, FAO partly)
- 6. Develop and national reforestation policy and afforestation strategy (proposed to ITTO)

## 5. FDA Law Enforcement Workplan

- 1. Information sharing with the public (USFS)
- 2. Compliance checks (USFS, WB, FAO)
- 3. Making Laws and FDA regulations practicable and effective (USFS, WB)
- 4. Coordinated law enforcement activities with other agencies and stakeholders (USFS, WB, FAO, FFI, IUCN)
- 5. Compliance of law enforcement by all FDA staff (USFS, WB, FAO)

## 6. FDA Strategic Planning Workplan

- 1. Develop accurate and reliable information to support strategic decision making (FAO, IUCN, WB)
- 2. Develop a national forest management strategy (USFS, WB)
- 3. Ensure monitoring and evaluation of effectiveness in FDA strategy implementation (WB, FAO)
- 4. Ensure consistency between policy, law, regulations, strategy and implementation (WB, FAO, USFS, USAid)
- 5. Develop collaboration and ensure coordination with relevant government agencies (USAid, USFS, WB, partly)
- 6. Ensure free flow of information with FDA (WB, FAO)

Work Program Area 4.6 was chosen by FDA to be submitted to ITTO because of the urgency of the preparation of a comprehensive reforestation policy in national forests as commercial logging operations will re-start before the end of 2008 and after-logging policies need to be in place. Program area 4.3 which deals with the determination of the Permanent Forest Estate would have been another area in which ITTO has a key competency, but considering the insecure land-use situation, it is considered that starting with this work area now would be premature. The development of trans-boundary protected areas, another key competency of ITTO is not relevant as the only neighboring country that is member of the ITTO is Côte d'Ivoire, and the most interested transboundary area is with Guinea and Sierra Leone, both not members of the ITTO.

## PART II: THE PROJECT

## 1. <u>Project Objectives</u>

## 1.1 <u>Development Objective</u>

The Project's Development Objective is "Develop forest plantations and forest restoration as an effective tool for the conservation and sustainable management of the Liberia's forest and wildlife resources, to maintain environmental quality and improve the flow of benefits to all segments of society".

## 1.2 Specific Objective

The Project's Specific Objectives are twofold:

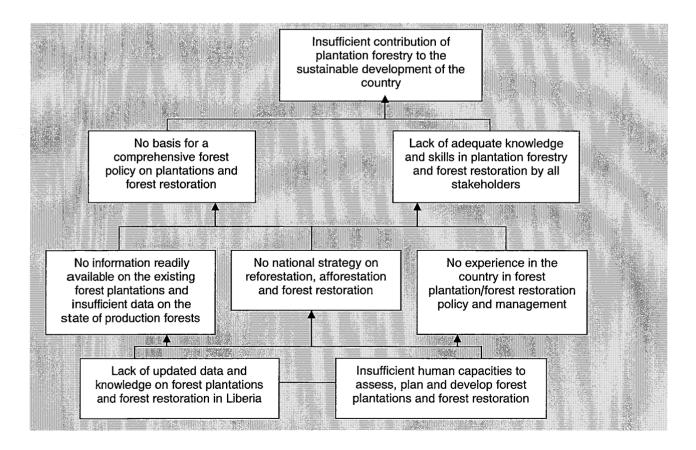

- Develop a national reforestation policy and afforestation strategy consistent with the National Forestry Reform Law; and
- Develop knowledge, expertise and capability of the Forest Development Authority and other stakeholders to assess, monitor and plan forest plantation and forest restoration activities in the country.

## 2. Justification

## 2.1 Problems to be addressed

The proposed project is inscribed into the wider reform process of reestablishing a functioning forest sector that is so vital for Liberia's development. As described in Part 1/Chapter 3, the project addresses a specific working area within a wider reform process that has been undertaken by FDA together with its development partners in a cooperative manner. Although the importance of natural forest management as the most important resource for timber in the country, reforestation (defined in the wider sense by including forest restoration) and afforestation on bare land and in critical ecological zones are important additional tools to achieve sustainable forest management in the country and a continuous flow of forests goods and services. However, due to the long years of war and civil unrest in the country, the situation of past investments in reforestation and afforestation remain today widely unknown. There a general lack of updated data and knowledge on forest plantations and forest restoration in Liberia. In addition, due to the same reason, there is today insufficient human capacities available in FDA and in the country in general to assess, plan and develop forest plantations and forest restoration. Thus, the two core problems formulated in the problem tree is the lack of knowledge about existing forest plantation assets and the lack of human capacity.

## Figure 1: Problem Tree

## 2.2 Intended situation after project completion

At the conclusion of the project, it is expected that the following will be achieved:

 a national reforestation policy is developed and adopted to be applied in commercial forest operations for timber stand improvement, timber plantations and enrichment planting;

- a national afforestation strategy exists, for community and conservation purpose and private sector development;
- a database on existing forest plantations is established and operational;
- a technical-scientific document of plantation development, including plantations purposes, species selection and silvicultural aspects of reforestation and afforestation has been published
- The afforestation potential, considering broader land-use aspects and the potential for A/R CDM eligible projects is known
- Roles and responsibilities in afforestation, reforestation and forest restoration is defined for the FDA
- An incentive structure is proposed to promote afforestation and reforestation in the country; and
- People from various stakeholders trained in plantation forestry and forest restoration

The project development process was based on extensive in-country consultation of the key stakeholders i.e. government, the industry, the traditional forest owners, concessionaires and the local environmental NGOs. These consultations comprised several multi-stakeholder workshops. The project results have therefore the approval and support of the various stakeholders.

## 2.3 Project Strategy

The project will first address the lack of information on the existing plantations, enrichment planting and timber stand improvement areas. This will be done by searching for old data files, GIS photo interpretation and field assessment and measurements. In this way, the project will gather the necessary information on success and failure from the past and bring these to the attention of all intersted stakeholders. In parallel, an assessment of potential reforestation and afforestation areas will be conducted. A particular issue to be addressed here are land-use and land tenure aspects. Thus, the project will concentrate on a number of selected areas where the particular land use problems can be assessed and therefore inform the policy making process.

The project introduces as an additional new element, the assessment of the potential of forest restoration as a forest mitigation option in climate change in a post-2012 approach and the assessment of the CDM Afforestation and Reforestation land potential in the country relevant in the Kyoto Protocol. These assessments will be made public to potential foreign carbon investors.

Indepth studies on silvicultural issues, relating to species selection, economically feasible enrichment planting options, indigenous timber plantations and timber stand improvement methods will be elaborated and prepared for consideration in the reforestation policy. At the level of afforestation, community-based woodlots, biofuel/fuelwood plantations and agroforestry options will be considered in particular, besides possible investment opportunities for wide-scale fiber production.

An economic study will be conducted to assess the economic potential of afforestation and reforestation in the country and to propose possible incentive mechanisms to promote such investments by private sector, individuals and communities. The project will also assess the situation of the rubber estate (which is managed outside the forest sector as an agricultural crop). In developing a afforestation strategy, it will also focus on the particular use of rubber trees for lumber.

The core issue of building capacities will be tackled in a cross-cutting approach in all activities proposed and particular activity streams will be dedicated to in-service training of FDA staff, communities, forestry training institutes and interested stakeholders.

## 2.4 Target beneficiaries

The National Forest Policy of 2006 indicates clearly in chapter 5.2 under "**Responsibilities**" the target group for future forest and tree plantation development, as follows:

"The private sector, individuals, local communities and community-based organizations will be responsible for reforestation in the future. The role of government will be to create an enabling environment for forest plantation development and to facilitate tree planting for social and environmental benefits, by providing technical advice and other incentives for tree planting. The government will also be responsible for monitoring tree planting activities to ensure that they follow best practices."

Thus, target beneficiaries of a national reforestation policy and afforestation strategy are:

- <u>Private sector investors</u>: in respect to the reforestation policy, they will get clear guidance on how to conduct enrichment planting (as part of the concession requirements) and they will get technical advice and other incentives for timber plantation investments on a voluntary basis. They also will get advice on possible carbon forestry investment through CDM Afforestation and Reforestation, and forest restoration through REDD. In respect to the afforestation strategy, private sector will have clear indications on afforestation sites for different purposes.
- <u>Forest-dependent communities</u> benefit from the consultative approach in the preparation of the policy and strategy. Pilot training activities in fruit tree planting, forest restoration and small-wood lot planting will be conducted and a simple Manuel on these techniques will be produced. It is expected that these activities will help to initiate a wider program in respect to community-based plantation forestry and agroforestry.
- <u>The Forest Development Authority</u> will benefit through the building of the necessary capacities to assess, plan and monitor forest plantation activities and through the establishment of a comprehensive data bank to that purpose. It is expected that through the project, FDA will be able to fulfill its role to provide technical advice and other incentives for tree planting.
- Other sector (in particular Agriculture, Mines and Environment): will benefit from clear indications
  from forestry on where investments are planned to be undertaken in forest restoration, timber
  plantations on forest land and in afforestation on non-forest land. This will help to inform the overall
  process of land-use planning. In respect to the rubber plantation estate, the Ministry of Agriculture
  will benefit from the inclusive process of assessment of existing planted stocks by the project, which
  will include the extent and situation of rubber plantations that fall under the jurisdiction of the Ministry
  of Agriculture.

## 2.5 Technical and scientific aspects

The main output of the project - the national reforestation policy and afforestation strategy - will be based on a thorough assessment of the existing afforestation and reforestation potential in the country and new and proven knowledge from other countries in the field of planted forests and forest restoration. It will include the newly created potential that is offered through the climate change mitigation agenda (A/R CDM and REDD) and it will carefully consider the pros and cons of forest-based biofuel as a development option for Liberia's forest sector. Emphasis will be given to create the enabling conditions so that concession holders can develop sustainable, long-term options in logged-over forests, through forest restoration, in particular enrichment planting and group reforestation with valuable hardwood species. Clear technical options also have to be offered to community forests that are new in Liberia and need careful attention in the immediate future.

Until date, Liberia did not have a strategic approach in respect to reforestation, afforestation and forest restoration. First forest plantations had been undertaken in 1971, promoted by some bilateral cooperation with Germany and FAO with the view to develop a pulp and paper industry. Plantation development ceased in 1983, with the exception of some privately based initiatives. Due to the lack of strategic approach and the long years of civil unrest and civil war, planted forests and forest restoration activities were completely absent in the country. Today, even the fate of most of the existing plantations is not known. Table 1 summarizes existing information compiled from files and based on knowledge of senior technical staff of FDA.

| Plantation Area*            | Area<br>(ha) | Years of planting | No.<br>species<br>planted | Main 5 species planted  |
|-----------------------------|--------------|-------------------|---------------------------|---|
| Cavalla, Grand Gedeh        | 988          | 1971-83           | >17                       | Gmelina arborea, Tectona grandis, Khaya anthotheca,<br>Terminalia superba, Eucalyptus spp.        |

| TOTAL                    | 9741 |            |     |   |

\* with exception of Foya area, all plantations are on reforestation sites

In addition to these planted forests, several thousand of hectares of <u>rubber plantations</u> exist in the country, which are under the jurisdiction of the Ministry of Agriculture. They have been created and maintained by 7 private firms, including Firestone, LAC (Liberian Agricultural Company), Weala. Liberia's rubber business is booming and world market prices of rubber are attractive to encourage other stakeholders to get into the sector including smallholders. The potential of rubberwood is recognized, but yet not explored. Hevea plantations harvested for rubberwood would fall under the jurisdiction of the FDA.

Enrichment planting and timber stand improvement (TSI) after logging in natural forests will become an important requirement to be undertaken by commercial operators in national forests. Reforestation with high-valued timber species in heavily degraded areas is another option to increase value of the timber resource base. Clear guidance need to be given in this respect in the reforestation policy. Recently made experiences in this field, partly through ITTO sponsored activities, will be taken into account, and it is planned to learn from experiences made in neighboring Côte d'Ivoire and Ghana. Species that could be potentially included in forest restoration, particular enrichment planting and reforestation are, *inter alia* Niangon (*Heritiera utilis*) Kusia (*Nauclea diderichii*), *Khaya anthotheca*, Aiélé (*Canarium schweinfurthii*), Samba (*Triplochiton scleroxylon*), Tet (*Tetraberlinia tubmaniana*), Faro (*Daniellia ogea*), Frake, Framiré (*Terminalia ivorensis, T. superba*), Abura (Mitragyna ciliata), Ako (*Antiaris welwitschii*), *Ceiba pentandra*, besides others.

Technical and scientific knowledge on how to implement <u>Community based</u> planted forests, small woodlots for local timber use and energy use, and agroforestry schemes yet do not exist in the country. However, communal and community forests are an essential element in the new forest policy in the country, and a new community forest law is being finalized in 2008. The proposed project thus will have the important task to encourage communities involvement in forest plantation establishment and development.

The project will have to consider the above described different conditions for reforestation and afforestation and propose economically, ecologically and socially applicable strategies for afforestation, reforestation and forest restoration. Besides these more forestry based issues, the project also need to tackle the broader development policy agenda in the country; thus it is important to situate the reforestation policy and afforestation strategy into the wider land-use aspects, which include agricultural expansion, mining and infrastructural development. It is therefore important to integrate the country's reforestation policy and afforestation strategy into the overall land allocation and land-use policies.

## 2.6 Economic aspects

Since the 1970s and until the UN-imposed ban on timber export from Liberia, the forest industry sector was the most rapidly growing segment in Liberia's economy, generating in the beginning of the 1990s more than 100 million US\$ in export sales per year. Traditionally, Liberia's forest industry is based on log extraction from natural forests and only few efforts have been made in the past to achieve sustainable yield production in natural forests. Investments in planted forests were virtually absent. After the lifting of the UN sanctions, natural forest management will remain the backbone of Liberia's forest economy in the near future. Preparative work is being undertaken to allocate new forest concessions and it is expected that by end of 2008, a number of forest concessions have resumed their activities and guarantee a new revenue flow to the national economy. Up to 2.6 million ha of forests have timber production potential and a considerable part of that area will be leased out to the different forms of forest concessions in the near future. This will create a secured and the much needed revenue stream to Liberia's economy. The reforestation policy is an important

element to help to guarantee that such revenue stream will last in the long term. Concessionaires will have to apply sustainable forest management planning, and reforestation, through enrichment planting, gap planting and forest restoration.

In the longer term, it is important that Liberia has a valid strategy not only for natural forest management, but also for restoring heavily degraded areas, restoring protective functions of forests, e.g. at the coastline against the negative effects of climate variability, in helping to achieve food security through community-based forestry and agroforestry activities and to fuel the possible development of a forest-based industry, including possibly pulp and energy generation. The new instruments available through the Climate Change Convention, in particular the valuation of forest-based carbon is another strong incentive to consider afforestation and reforestation as an additional economic pathway in forestry, besides natural forest management. An afforestation strategy thus is important to be considered in a mid-term economic planning of the country.

## 2.7 Environmental aspects

The project will achieve positive environmental outcomes for Liberia's forestry sector and contribute to improved sustainable forest management outcomes. Over the past two years, Liberia has experienced the longest period of peace, social stability and a gradual improvement of the economic and social conditions since decennials. If this development pathway continues, the country has great potential to achieve higher level of economic and social prosperity. This will also increase pressure on forest land and lands that have been developed over the past 10 to 20 years into secondary forests due to the absence of agricultural activities. It can be expected that with increased investment, deforestation will increase and the protection measures for watersheds, soils, water and biodiversity will have to be intensified in order to guarantee sustainable outcomes. The proposed project particularly considers the role of planted forests and trees in agricultural landscapes in the framework of sustainable landscape development. Reforestation, afforestation and forest restoration have great potential to support sustainable development through particular consideration of environmental aspects besides economic and social development. The project will develop criteria for Liberia to promote the protective functions of forests in particular in view of the increasing threat that is posed by climate change. Particular consideration will be given to the promotion of indigenous tree species in reforestation activities in degraded natural forests and to support natural regeneration through forest restoration and rehabilitation of degraded lands. Planting trees and forests in buffer zones of protected areas is another important aspect that will be considered in the proposed afforestation strategy and reforestation policy for erosion control purposes and to alleviate negative effects from e.g. climate change.

## 2.8 Social aspects

Creating new forests, restoring existing degraded forests and creating new options to introduce trees in nonforested areas through agroforestry and other land-use systems are all linked with the creation of new assets that have the potential to be immediately beneficial to local communities and the society in Liberia as a whole. Reforestation and forest restoration activities in forest concessions and planting new forests create jobs and the maintenance of such new investment guarantees sustainability of such jobs. Community-based woodlots and other plantations can immediately contribute to improved livelihoods of involved communities. Even large scale, privately funded afforestation for economic purposes such as biofuel, pulp and paper can have long-term social benefits if the right safeguards are applied and employment conditions are carefully monitored.

## 2.9 <u>Risks</u>

Besides the importance of keeping political stability in the still fragile post-war era, an important risk is linked with broader land-use and land tenure situation in Liberia. An afforestation strategy and reforestation policy need to be recognized and implemented not only at the level of the forests sector, but also with other line ministries that deal with land-use issues in rural Liberia, including the Ministry of Agriculture, the Ministry of Lands and Mines and the Ministry of Internal Affairs that is responsible for interior administration through the traditional chiefs, paramount chiefs and superintendents. The reforestation policy and afforestation strategy thus need to be made compatible with all other land-use aspects and be broadly communicated to stakeholders outside the forestry sector.

The implementation of the reforestation policy and afforestation strategy is closely linked with the availability of forest-based investments in the country. An insufficient development of the investment environment in

Liberia, including investments in plantations development and transformation industry, will jeopardize the implementation of the strategy and policy.

Another considerable risk at the moment is the lack of implementation capacity and skilled manpower in the country. Without broad knowledge and capacities, the implementation of the proposed strategy and policy will be hardly possible.

All these risks are partly addressed in the proposed project. They are also considered in the wider multidonor approach through the Liberian Forestry Initiative.

## 3. Outputs

- 3.1 <u>Specific Objective 1:</u> Develop a national reforestation policy and afforestation strategy consistent with the National Forestry Reform Law
  - Output 1.1: All existing forestry plantations are assessed and timber volume and qualitative data per area interpreted
  - Output 1.2: Suitable sites for reforestation and afforestation, as well as forest restoration identified
  - Output 1.3: The potential of CDM A/R and forest restoration in REDD assessed
  - Output 1.4: A draft policy for enrichment planting and reforestation activities to be applied in areas of Timber Sales Contracts and Forest Management Contracts developed
  - Output 1.5: Preliminary results of assessments, policies and strategies, widely consulted with forest stakeholders
  - Output 1.6: Draft reforestation policy and an afforestation strategy based on the results of Outputs 1.1. 1.5 elaborated

# 3.2 <u>Specific Objective 2:</u> Develop knowledge, expertise and capability of the Forest Development Authority and other stakeholders to assess, monitor and plan forest plantation and forest restoration activities in the country

- Output 2.1: A core team of technicians has been trained in the assessment and implementation of reforestation and afforestation
- Output 2.2: A series of technical workshops has been conducted to train FDA staff and stakeholders from NGOs and private sector in forest restoration, reforestation and afforestation
- Output 2.3: Community dwellers and local NGOs involved in the development of community forestry have been trained in practical aspects in forest restoration, afforestation and agroforestry.

## 4. <u>Activities</u>

<u>Specific Objective 1</u>, develop a national reforestation policy and afforestation strategy consistent with the National Forestry Reform Law

# Output 1.1: All existing forestry plantations are assessed and timber volume and qualitative data per area interpreted

- Activity 1.1.1: Elaborate a method of assessment and check list
- Activity 1.1.2: GIS/Satellite mapping of existing plantations and degraded areas
- Activity 1.1.3: Collect and assess information on existing plantations
- Activity 1.1.4: Assess existing plantations in the field according to proposed check list
- Activity 1.1.5.: Validate the information, establish a data base and prepare a report on existing plantations

| Output 1.2:     | Suitable sites for reforestation and afforestation, as well as forest restoration identified.   |
|-----------------|---|
| Activity 1.2.1: | Identify up to X ha of suitable sites through GIS/satellite interpretation and field assessments  |
| Activity 1.2.2: | Clarify land-use and tenure aspects on chosen sites   |
| Activity 1.2.3: | Develop silvicultural approaches for enrichment, reforestation, forest restoration, afforestation and agroforestry being proposed for chosen sites              |
| Activity 1.2.4: | Consult stakeholders from civil society, private sector and local communities on site approaches  |
| Activity 1.2.5: | Summarize results and prepare report on site selection and silvicultural approaches   |
| Output 1.3:     | The potential of CDM A/R and forest restoration in REDD assessed.   |
| Activity 1.3.1: | Within the potential afforestation sites, select CDM A/R eligible land  |
| Activity 1.3.2: | Prepare report for potential investors for CDM A/R  |
| Activity 1.3.3: | Assess in selected degraded forest sites, carbon sink potential and model forest restoration as an approach in REDD   |
| Activity 1.3.4: | Conduct a technical workshop with specialists to validate proposed forest carbon approaches and prepare report  |
| Output 1.4:     | A draft policy for enrichment planting and reforestation activities to be applied in areas of Timber Sales Contracts and Forest Management Contracts developed. |
| Activity 1.4.1: | Summarize existing experience in enrichment planting and timber plantations in Liberia and the sub-region   |
| Activity 1.4.2: | Develop, in collaboration with selected concessionaires, silvicultural guidelines for enrichment plantings and timber plantations                               |
| Activity 1.4.3: | Prepare draft policy document and technical document on silvicultural aspects of timber stand improvement through enrichment planting and timber plantations    |
| Output 1.5:     | Preliminary results of assessments, policies and strategies, widely consulted with forest stakeholders.   |
| Activity 1.5.1: | Conduct a study on the economics and possible incentive schemes for forest plantations  |
| Activity 1.5.2  | Summarize and prepare overview papers on achieved results from output $1.1 1.4$ .   |
| Activity 1.5.3: | Consult stakeholders at national level  |
| Activity 1.5.4: | Validate outputs of the consultations process   |
| Output 1.6:     | Draft reforestation policy and an afforestation strategy based on the results of Outputs $1.1 1.5$ elaborated.  |
| Activity 1.6.1: | Draft a reforestation policy, including enrichment planting and forest restoration  |
| Activity 1.6.2: | Draft an afforestation strategy, including community forestry and conservation needs  |
| Activity 1.6.3: | Consult the outputs with relevant stakeholders  |
| Activity 1.6.4: | Present the reforestation draft policy and afforestation strategy to the Authority  |

<u>Specific Objective 2: develop knowledge</u>, expertise and capability of the Forest Development Authority and other stakeholders to assess, monitor and plan forest plantation and forest restoration activities

# Output 2.1: A core team of technicians has been trained in the assessment and implementation of reforestation and afforestation.

Activity 2.1.1: Recruit two bachelors and one forest ranger as young professionals in the project

- Activity 2.1.2: Basic training of core team of FDA and recruited young professionals in plantation forestry
- Activity 2.1.3: Prepare detailed work plans of project activities on a 6-months basis

Output 2.2: A series of technical workshops has been conducted to train FDA staff and stakeholders from NGOs and private sector in forest restoration, reforestation and afforestation.

- Activity 2.2.1: Technical workshop on forest restoration and reforestation
- Activity 2.2.2: Workshop on the economics of reforestation and afforestation
- Activity 2.2.3: Workshop on CDM Afforestation and Reforestation, Biofuel and REDD
- Activity 2.2.4: Preparation of Guidelines on forest plantation development in Liberia
- Output 2.3: Community dwellers and local NGOs involved in the development of community forestry have been trained in practical aspects in forest restoration, afforestation and agroforestry.
- Activity 2.3.1: Conduct 5 field based workshops on silviculture of restoring forests, small-scale plantations and agroforestry
- Activity 2.3.2: Establish 5 community run nurseries and train people accordingly
- Activity 2.3.3: Summarize the experience in form of a simple illustrated Manual

5.

## Logical Framework Worksheets

| PROJECT ELEMENTS   | INDICATORS  | MEANS OF VERIFICATION   | IMPORTANT<br>ASSUMPTIONS   |
|--|---|---|--|
| DEVELOPMENT OBJECTIVE  |   |   |  |
| Develop forest plantations and forest<br>restoration as an effective tool for the<br>conservation and sustainable management<br>of the Liberia's forest and wildlife resources,<br>to maintain environmental quality and<br>improve the flow of benefits to all segments<br>of society | Investments in plantation<br>forestry are considered as<br>substantial contribution in the<br>country's economy               | At least 500 ha of forest<br>plantations per year (including<br>enrichment, reforestation and<br>afforestation) are undertaken<br>in the country from 2011<br>onwards | Political stability; still strong<br>focus on forest development<br>by the government; land<br>tenure situation for planted<br>areas clarified |
| SPECIFIC OBJECTIVES  |   |   |  |
| 1. Develop a national reforestation policy and afforestation strategy consistent with the National Forestry Reform Law   | Policy and Strategy adopted by the relevant Authority and through national consensus  | Documents published by<br>Ministry of Foreign Affairs   | National Forest Policy and<br>Implementation Strategy<br>remains in vigor  |
| 2. Develop knowledge, expertise and<br>capability of the Forest Development<br>Authority and other stakeholders to assess,<br>monitor and plan forest plantation and forest<br>restoration activities in the country   | Five trained staff in plantation<br>forestry, a mix of junior and<br>senior, operational in FDA and<br>in training institutes | Credentials of staff, results<br>from workshop discussions,<br>involvement of staff in<br>technical discussions   | FDA is ready to invest in staff<br>planning and to keep<br>motivated staff in the service  |
| OUTPUTS  |   |   |  |
| 1.1 All existing forestry plantations are assessed and timber volume and qualitative data per area interpreted   | Assessed existing plantation and data available   | Filed data sets, reports, maps and other documents  | Documentation available and<br>planting areas still<br>recognizable  |
| 1.2 Suitable sites for reforestation and afforestation, as well as forest restoration identified   | Documentation of identified sites according to different plantation strategies  | Filed maps, measured sites,<br>and site descriptions  | Land tenure and land-use<br>situation of selected sites<br>clarified   |
| 1.3 The potential of CDM A/R and forest restoration in REDD assessed   | Identified eligible sites for CDM<br>A/R; carbon model in a selected<br>forest restoration area                               | Filed maps, measured sites,<br>REDD project descriptions  | For CDM: 1990 baseline data<br>available   |

| PROJECT ELEMENTS   | INDICATORS   | MEANS OF VERIFICATION   | IMPORTANT<br>ASSUMPTIONS   |
|--|--|---|--|
| 1.4 A draft policy for enrichment planting<br>and reforestation activities to be applied in<br>areas of Timber Sales Contracts and Forest<br>Management Contracts developed                | of Timber Sales Contracts and Forest   |   | Continous policy interest in<br>enrichment planting as a<br>requirement stipulated in the<br>law   |
| 1.5 Preliminary results of assessments, policies and strategies, widely consulted with forest stakeholders   | Stakeholder involvement and agreement on further process   | Workshop consultation reports   | Maintenance of the good culture of consultation  |
| 1.6 Draft reforestation policy and an afforestation strategy based on the results of Outputs 1.1. – 1.5 elaborated   | Concerted documents prepared   | Published draft reforestation policy and afforestation strategy                               | Output 1.1. – 1.5 have produced conducive results  |
| 2.1 A core team of technicians has been trained in the assessment and implementation of reforestation and afforestation  | Functional and highly professional team in place   | List of staff and functions   | Specific training conducted<br>and engagement of FDA to<br>second dedicated staff to the<br>project  |
| 2.2 A series of technical workshops has been<br>conducted to train FDA staff and<br>stakeholders from NGOs and private sector<br>in forest restoration, reforestation and<br>afforestation | Broader stakeholder<br>understanding of the main<br>issues of reforestation and<br>afforestation, including carbon<br>forestry, in the country | Evaluation reports of<br>workshops; feedback from<br>trained participants                     | Good communication climate;<br>full involvement of the two<br>training institute in the<br>preparation and<br>implementations of trainings |
| 2.3 Community dwellers and local NGOs involved in the development of community forestry have been trained in practical aspects in forest restoration, afforestation and agroforestry       | Pilot sites in community forestry in place   | Feedback from local<br>communities and number of<br>plants produced in promotion<br>nurseries | Engagement of community forestry development staff; respect of equity concerns   |

## PART III. OPERATIONAL ARRANGEMENTS

#### 1. Management Structure

The implementing agency is FDA, in particular the Department of Research and Development that will be supported and supervised by the ITTO focal point in Liberia. The project unit will be fully integrated into the DRD. DRD will manage the project and provide progress reports to the ITTO. The FDA will also select the national and international experts and consultants for the project in consultation with the ITTO, as well as be the liaison between the consultants and key stakeholders. Figure 2 illustrates the management structure for the Project.

## Figure 2 : Management Structure for the Project

#### 2. Project Monitoring, Reporting and Evaluation

## 2.1. Arrangements for Reporting

- (a) The National Project Coordinator will prepare and submit six monthly progress reports to the ITTO and the Steering Committee, based on the work plan and the input given by consultants. The first Report shall be submitted not later than 6 months after Project start-up.
- (b) A Project Completion Report will be submitted to the ITTO three months after the Project.

#### 2.2. Monitoring, Reporting and Evaluation

The project will be subject to periodic monitoring by representatives of the ITTO at least every six months during the life of the project. Monitoring and evaluation by the ITTO could coincide with the submission of progress reports. Allowance has been made in the project budget to enable this to occur. The dates of evaluation visits will be agreed between the ITTO and the Project

management team, and its Terms of Reference will be formulated jointly by the monitoring mission and the Project staff, for approval by the ITTC.

## Suggested Monitoring, Reporting and Evaluation Schedule

| Description                                    | Dates          |
|--|----------------|
| Signing of agreement                           | January 2009   |

### 3. Future Operation and Maintenance

To ensure that the Project delivers maximum benefit to Liberia, it is intended that periodic reviews will be conducted of the adequacy and effectiveness of the assessment and the related capacity building. Such reviews will involve the Steering Committee coupled with two one-day workshops with all key stakeholders, held at the beginning of the project in March 2009 and 6-months prior to project completion in October 2010. Corrective action will be taken if the reviews indicate any inadequacies.

## 3.1 On-going sustainability of the project

The project is expected to develop inputs for the further enhancement of the National Forest Policy and Implementation Strategy in its overall objectives on forest restoration, reforestation and afforestation. No follow-up activity is planned in the framework of the ITTO project cycle.

## PART IV. THE TROPICAL TIMBER FRAMEWORK

## 1. Compliance with ITTA 1994 Objectives

The project is fully compliant with the objectives of the International Tropical Timber Agreement 1994, in particular with the following specific objectives:

• (j) "Encouraging members to support and develop tropical timber reforestation, as well as rehabilitation and restoration of degraded forest land, with due regard for the interests of local communities dependent on forest resources".

This objective is indeed the core concern of the project and the ultimate aim of the Liberian reforestation policy and afforestation strategy that will be prepared through the project.

• (I) "To encourage members to develop national policies aimed at sustainable utilization and conservation of timber producing forests and their genetic resources and at maintaining the ecological balance in the regions concerned, in the context of tropical timber trade"

The project relates to this objective in particular through the preparation of the reforestation policy that contributes to the sustainable management of production forests in Liberia (post-logging silviculture, timber stand improvement, enrichment, restoration).

• (c) "Contributing to sustainable development and to poverty alleviation".

The project relates to this important objective of the ITTA 1994 in particular through the promotion of community based afforestation strategies and the rehabilitation of community-managed forests.

In respect to the forthcoming ITTA 2006, the project is compliant with the following specific objectives: (c), (j), (l), (m), (r) and (s).

## 2. Compliance with ITTO Yokohama Action Plan

The project is particularly in line with the goals cited under Actions of the Reforestation and Forest Management Division, which comprise in Goal 1 to securing the resource base and in Goal 2 to promoting its sustainable management, including *inter alia* Action 5 which is "Monitor and assess environmental, social and economic costs of forest plantation development ...). The Action Plan particularly recognizes the potentially beneficial role of afforestation and reforestation for sustainable forest management and sustainable development.

Particular reference should be given to Goal 2 Actions 10(4) and 10(5) of the Reforestation and Forest Management Committee that relate to natural forest management, timber stand improvement, enrichment and reforestation as well as the important role of forest restoration and rehabilitation of degraded forest lands.

The project also corresponds to actions stated under Forest Industry, Goal 1, including Action 1 (Promote private investment ...) and Action 3 (Commission and publish analytical studies in the field of tropical timber) under Action 2 (Study and promote policies and other measures ...).

Particular attention in the project is given to one of ITTO's core competencies that had been highlighted in the Yokohama Action Plan and which relate to Forest Restoration. Emphasist is also given to two of ITTO policy guidelines, the Guidelines on Planted Forests and the Guidelines on Forest Restoration, Management of Secondary Forests and Rehabilitation of Degraded Forest Lands.

#### ANNEXES

#### ANNEX A – PROFILE OF THE EXECUTING AGENCY

#### The Expertise of the Executing Agency

The Forestry Development Authority (FDA) is an Autonomous Agency created by an Act of Legislature in 1976 with the mandate to serve as custodian of Forest Resources to include regulating, monitoring and conserving of the Republic of Liberia. The FDA has being operating for the past twenty-two years (22) in this capacity.

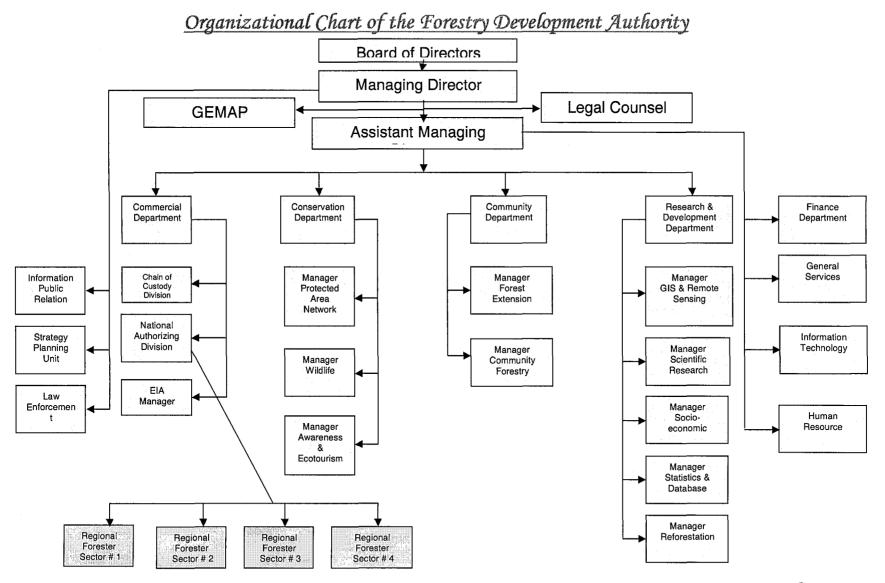

The FDA has a Nine Member Board constituted by the President of Liberia in compliance with the Act creating the FDA in 1976. The Agency at present has a total staff of 293 comprising the Managing Director, who is the principal driver of both administrative and technical operations. The second in command is the Assistant Managing Director for administration and Finance and the Four Technical Managers for Commercial, Conservation and Community Forestry operations. The Technical Managers are assisted by 33 Line managers in various aspects of operations and administration of running the FDA. The four sectors (Regional) Offices are supervised by four Regional Foresters assisted by District Officers with a host of rangers.

#### The Infrastructure of the Executing Agency

The FDA has a central office located in Monrovia with Four sectors offices situated in Kakata (Margibi County), Tubmanburg (Bomi County), Zwedru (Grand Gedeh County) and Sanniquelle (Nimba County) and includes twelve Districts Offices.

#### Budget:

The FDA fiscal budget for 2008/2009 total US\$ 2, 790, 158, which consist of Personnel (1, 975, 669), Goods and Services (731,457) and Capital Expenditure (83,032)

## ANNEX B - CURRICULA VITAE OF THE KEY STAFF<sup>1</sup>

## 1. National project coordinator, national project staff

- Name: Victor Y. Dolo, Sr., Liberian citizen, E-mail <u>victor dolo@yahoo.com</u> Professional education: B. Sc. General Forestry, W. R. Tolbert College of f Agriculture and Forestry, University of Liberia
- Professional assignment: Manager of the Reforestation Unit in the Research and Development Department of FDA
- Speciality: Project Coordinator, supported by Bledee V. Dabge, ITTO liason officer in FDA
- Name: **Francis K. Kpadeh**, Liberian citizen, E-mail <u>franciskkpadeh@yahho.com</u> Professional education: B. Sc. In General Education, University of Liberia
- Professional assignment: Assistant Manager of the Reforestation Unit in the Research and Development Department of FDA
- Speciality: Assistant Project Coordinator of the ITTO project

## 2 National Technical Advisor

- Name: Zwuen, Sormongar Sarday, Liberian citizen.
   Professional education: Graduate Certificate Oxford Forestry Institute; M.Sc University of the Philippine, Los Baños, B. Sc. General Forestry, W. R. Tolbert College of Agriculture and Forestry, University of Liberia
- Professional assignment *inter alia*: University Lecturer; Manager Environmental Protection; National Consultant Biodiversity Strategy Action Plan; Research Consultant Forest Plantations in Ivory Coast; Head Forest Research Institute of Liberia
- Role: National technical consultant and backstopper, in close collaboration with the international technical advisor; Mentor of the young professionals that will be employed and trained through the project

#### 3 Lead international technical advisor/backstopper

- To be determined, according to the terms of references attached in Annex C
- Professional education: International forestry expert in forest policy and plantation/forest restoration development; Ph.D. or MSc. Level
- Professional assignments: Backstopping of the national team, capacity building
- Fields of particular experience for the proposed function in the project: Knowledgeable about the context of forestry in Liberia. A team of experts or a well known backstopping agency would be preferred over an individual consultant. Ready to closely collaborate with the senior national advisor and ready to undertake major knowledge transfer activities and capacity building to Liberian forest officers.

<sup>&</sup>lt;sup>1</sup> The present project proposal has been prepared in a collaborative work between a team of foresters of the FDA, coordinated by **Biedee V. Dagbe, the ITTO focal point in Liberia** and supported and backstopped by **Dr. Jürgen Blaser**, from Swiss Intercooperation, mandated by ITTO.

## ANNEX C – INDICATIVE Terms of References for International consultant and TCDC (technical consultant from developing country)

## TERMS OF REFERENCE FOR THE INTERNATIONAL BACKSTOPPER

## BACKGROUND

The Project is an outcome of the An Act Adopting the National Forestry Reform Law of 2006, Article 8, Section 8.3 (a) which state that "The Authority within two years of enactment of this Law, shall: (i) **identify suitable sites for reforestation and afforestation; (ii) develop a national strategy to address deforestation and promote silvicultural practices that will expand and enrich the national forest endowment**. The main output is to develop a National reforestation Policy and Afforestation Strategy to be applied in forested and non-forested areas at the same time building human capacities in forest restoration and plantation management.

**POSITION:** International Consultant, Technical Backstopper of the project

**DURATION**: 15 weeks, distributed according to the work programme over the project duration of 30 months. The consultant will do most of his/her backstopping duties in Liberia (at least 10 weeks), but he/she should also be available through e-mail and skype contact in between his/her missions.

#### **QUALIFICATION AND EXPERIENCE:**

#### A) Qualification

The Consultant must hold Ph.D or M.Sc degree or above in Forestry with emphasis in on tropical forestry, including policy development, silviculture of planted forests and forest restoration.

#### **B)** Experience

Besides his particular technical and scientific knowledge as a senior level academics with at least 15 years of practical experience in tropical forests, he/she must be well acquainted with the particular context of forests and land-use context in Africa. Experience in Liberia would be of great advantage..

#### MAIN TASKS

To assist the Government of Liberia formulate a National Reforestation Policy and Afforestation Strategy that will address forest restoration and Plantation Management/ establishment including Enrichment Planting under the framework of the implementation strategy of the New National Forestry Law, 2006 and the Forest Policy of Liberia, 2005.

#### The specific functions and duties are but not limited to the followings:

- 1. Assessment of existing plantation and recommend post harvesting regime;
- 2. Develop a National Reforestation Policy and Afforestation strategy;
- 3. Formulate a method of assessment and checklist for plantation Management;
- 4. Develop silviculture guidelines for enrichment planting, reforestation and afforestation;
- 5. Train the core Team of Forestry Development Authority and the project staff ( Junior Professionals (JP)) in plantation Management;
- 6. Identify suitable areas for plantation Establishment;
- 7. Prepare bi-annually report on the status of the project activities;
- 8. Prepare project completion report for submission to the steering committee; and
- 9. Identify and recommend sources of technical and financial support to Reforestation Program of Liberia.

## TERMS OF REFERENCE FOR THE TCDC

**POSITION:** Technical Consultant from Developing Countries (TCDC), preferable from the subregion,

**DURATION:** 6 weeks over a time span of 2 years

## **QUALIFICATION AND EXPERIENCE:**

#### A) Qualification

The Consultant must hold an M.Sc degree or above in Forestry with emphasis in Forest Economics with knowledge of plantation forestry and reforestation of degraded forests.

#### B) Experience

The Consultant must have worked extensively in the field of Forestry, in the Tropics for more than five years with a reputable firm in the capacity as a Consultant or Team Leader.

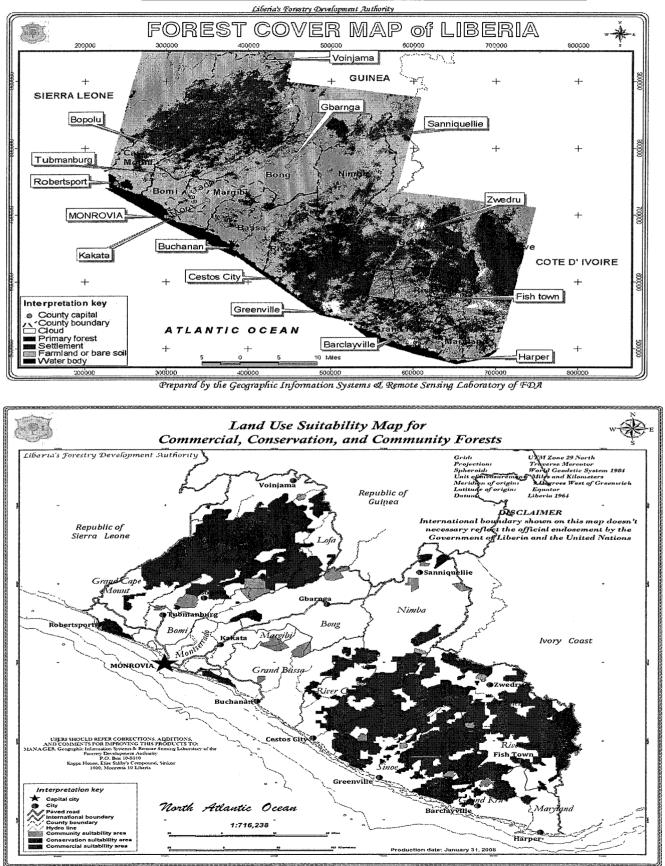

### MAIN TASK (S)

To assist the Government of Liberia formulate a Concept Paper on the Economics and Incentive Scheme for Plantation Management/ Establishment and Establishment consistent with the National Reform Forestry Law, 2006.

#### The specific functions and duties are but not limited to the followings:

- To conduct the training in the form of workshop on the economics and social implications of reforestation and afforestation in Liberia;
- To identify market potential for the selected species in forestry plantation establishment;
- To study the social dynamics of forestry plantation establishment in Liberia.
- To develop incentive scheme for plantation management and establishment.

It is expected that the international consultant/backstopper and the TCDC work in tandem and maintain a close working relationship. Arrangements can be made that the entire backstopping and consultancy work is outsourced to a reputable international organisation that can generate more knowledge and expertise to the project and increase leverage at the level of capacity building.

ANNEX D - Map of Liberia - Landcover in 2004 and land suitability map
